# Sip-Based Unified Messaging

## Message Handling Made Easier

In an environment of heightened competition and increasingly complex business communications, message handling just got easier and more cost-effective thanks to Coral SeaMail from Tadiran Telecom. SeaMail can help your company increase productivity and improve customer satisfaction by consolidating voicemail and email into a single inbox. Newly designed, this robust SIP-based messaging application provides a full range of functionality via a telephone or computer.

## Two Versions to Fit Every Application

There are two versions of the SeaMail messaging system – Basic and Enterprise. The SeaMail Basic version provides advanced features at an entry level price, while the Enterprise version has the capacity and flexibility to handle larger applications with the ability to add optional features like fax handling, speech recognition, and Text-to-Speech.

## Access to Voicemail and Email from Anywhere

Both SeaMail solutions offer advanced unified messaging features that can be accessed from any phone or computer. Since the SeaMail interface is SIP-based it does not require special cards to link callers to the voicemail system, and the installation can reside as an embedded application on the switching platform.

## Cross Platform Solution

The embedded SeaMail application is Linux-based and can run on a Coral Sea Softswitch server as well as on the main board of the Coral IPx Office. Note that some advanced features that require high processing power are only available when SeaMail is run on the Coral Sea Softswitch.

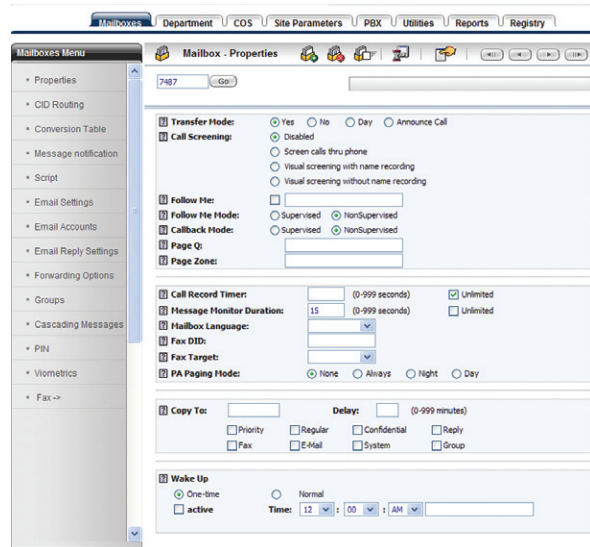

## Performance and Adaptability

Whether you add employees or decide to enhance your system with unified communication features, SeaMail can easily adapt to meet your organization's needs. The system can be managed from any computer via its browser-based interface (in the Sea Softswitch) or a local client (in the IPx Office), helping administrators more efficiently handle the demands of a dynamic business environment.

# Improve Responsiveness and Efficiency

## Business Benefits

- Single Unified Inbox - Access and manage voice and email from your favorite email inbox.
- SIP-Based Integration - Greatly reduced hardware requirements and universal installation potential result in lower costs and increased flexibility.
- Browser-Based Mailbox Manager – Modify greetings, security codes, notification, groups, and conversation preferences via your computer.
- Integration with Microsoft Outlook and POP3 email client applications with real-time IMAP synchronization between users email and voice mailboxes.
- Multiple Auto attendant routing trees.

Mailbox Usage Report

- IVR-like scripting capability.
- Handling of fax messages (requires support of T.38 in the gateway).
- Advanced Optional Applications (available with the Enterprise version on the Sea Softswitch).
- Text-to-Speech for Email - Reads emails to the user when accessing the system from a telephone.
- Voice Recognition - Callers can select the destination for their calls by speaking the name of the required user instead of keying an extension number. Other commands and responses to system prompts may also be given by speech rather than number keying.

## About Us
